

31 FireFile

120 minutes fire protection

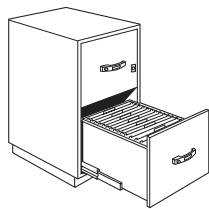

Model above is
4-31 120P

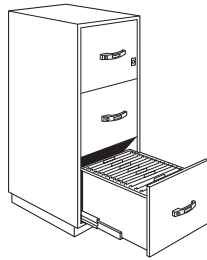

For many architects, solicitors and accountants the storage of their work documents is a major security requirement. Losing their project proposals or client data would have a disastrous impact on the company. Common outcomes include the loss of clients and a decline in capacity to attain new business. With the new “31 FireFile” from Rosengrens, you have a high quality fire-resistant filing solution. This cabinet offers secure fire and theft protection based on a comprehensive range of key features. Examples of these include certified 120 minutes fire protection, individual drawer protection, central key locking, extensive capacity and a choice of three sizes. With all these features, it is no surprise that many users are choosing the 31 FireFile as “the filing cabinet to own”...

* Each drawer's internal dimensions

Fire protection: The 31 FireFile filing cabinet is tested and certified by SP to NT Fire 017 I20P offering 120 minutes fire protection for documents.

Product features: 31 FireFile depth offers high storage capacity. The cabinet is available with 2, 3 or 4 drawers and the total available internal height of each drawer is 291mm, which is unique and makes them suitable for all types of file on the world market. The full-height sides of the drawers also make them very stable even when they are fully loaded. Each drawer has a steel-lined inner body which protects the contents from insulation dust. No unauthorised person can access anything in a locked drawer via an open drawer; as there is a separate barrier of insulation material between each drawer. This insulation material also protects the contents in each drawer independently from fire.

Locks: The cabinets are equipped with central key locking as standard.

Design: The 31 FireFile has a modern, functional design in Rosengrens classic light colour scheme. The filing cabinets are electrostatically powder-coated with a glossy finish, providing an environmentally friendly finish with good scratch resistance. Modern-design handles with an integrated card-holder comprise a unique system for labelling each drawer for easy location of stored documents.

Quality and environmental management systems: The 31 FireFile is manufactured in accordance with the ISO 9001 quality management system and the ISO 14001 environmental management system.

Rosengrens Product Guidelines: The construction of the 31 FireFile filing cabinet has been tested and approved to Rosengrens Product Guidelines, which are based on all relevant European norms. The aim is to verify user-friendliness, safety and product lifetime, thereby assuring customers that our products live up to the highest expectations.
